

## Kaihang Shi

### Comments:

The TA was very receptive to our questions but he assumes we are much more passionate about thermo as well as smarter than we actually are. Just because he is a master in thermo, doesn't mean we all are.

TA's taught a large portion of classes and I really liked their teaching style. TA's would explain a derivation and connect ideas that made the course more relevant.

Both Matt and Kaihang were excellent at teaching and explaining the material.

Kaihang was always available for office hours and would stay later if he needed to. He was very helpful in explaining the homework and making sense of the difficult material.

Kaihang's lectures were well-run, and his phase diagram session was very helpful.

The TA's lectures were very informational.

The on-campus TA that filled in for lectures talked too fast.
